The factors caused by the variation in the number of weekdays are taken into account in adjustment for working days. This means taking into consideration the lengths of months, different weekdays and holidays.

According to the Structural business and financial statement statistics, daily consumer goods accounted for 53.1 per cent of turnover in retail trade in 2020.

The retail trade flash estimate is based on a sample covering, on the average, 60 per cent of retail trade turnover. Data on trade sales by industry will next be released on 15 March 2022.

Flash estimates on retail trade are published at a lag of just under one month from the end of the statistical reference month. The preliminary data on other trade industries are published at a lag of roughly six weeks from the end of the statistical reference month and the revised data based on total data are published at a lag of roughly ten weeks.
